

EDICOM iPaaS

Integration Platform as a Service

TECHNOLOGY PLATFORM FOR INTEGRATING THE WHOLE
OF A COMPANY'S APPLICATIONS ECOSYSTEM.

In-House vs Cloud

Integrating it all is the big challenge

International companies generate and receive a vast volume of data from very diverse sources. This information, when properly analyzed, can be a significant edge for any organization.

That's why it's essential to have integration tools capable of interconnecting and synchronizing all the information from the different management applications.

⊗ Process fragmentation

The coexistence of dedicated applications for each business area produces management environments with disperse and/or redundant key data.

This produces a fragmentation of the information that resides in the facilities and cloud endpoints.

✔ Integration Platform as a Service

Cloud-based app integration platforms make it possible to articulate a series of processes which enable multiple disperse applications to share and synchronize information with no human assistance and on a recurrent and automatic basis.

Characteristics of an iPaaS project

SCALABLE PROCESSES

An iPaaS project offers a programming environment where each user has a set of dedicated resources for their own integration processes, regardless of other active processes.

WEB INTERFACE

As with other cloud apps, an iPaaS has a web interface that makes it possible to monitor and control integration processes.

PREDEFINED CONNECTORS

An iPaaS platform must by default include connectors to the main market apps across multiple categories like CRP, ERP, etc.

PROGRAM CONTROL

An iPaaS allows other service-mode apps to remotely control integrations with no need to implement a user interface.

HYBRID INTEGRATION MODELS

The integration software operates in the cloud and also enables functionalities to integrate the app processes run on-premise.

DATA VOLUME

An iPaaS platform must be in permanent evolution, incorporating new connectors that enable users to simplify integration processes.

EDICOMiPaaS Solution

Smart app integration

With EDICOMiPaaS (integration Platform as a Service) you can network all your management solutions through powerful tools available exclusively in service mode.

EDICOMiPaaS combines data transformation and connectivity solutions to integrate all your IT infrastructure (accounting, invoicing, warehouse management, CRM, etc.), whether housed in-house or in the cloud.

HYBRID infrastructure

Integration as a Service

EDICOM is one of the world's largest specialists in application integration, pioneering the development of SaaS solutions able to connect with in-house or cloud systems and transform multiple data structures into any language.

That's why EDICOM has multiple live projects across 65-plus countries, developed for some of the largest companies in the world with complex information-management ecosystems.

OUR CLOUD IS SECURE

EDICOM maintains strict control over the security of your data and the suitability of your processes, as vouchsafed by the certifications the company has earned.

ISO 27001

ISAE 3402

ISO 20000

TIER DESIGN

IN THE CLOUD

EDICOM assumes responsibility for the platform technology infrastructure, development, monitoring and maintenance.

REAL TIME

Integrations are implemented in real time, enabling instant monitoring and control of any process.

FULL SCALABILITY

Very complex integration projects can be undertaken thanks to the flexibility and scalability afforded by an iPaaS platform in the cloud.

HIGH AVAILABILITY

We use a Service Level Agreement to guarantee service availability and access to the platform. This is an essential aspect when uninterrupted data transfer processes must be maintained.

EDICOM iPaaS Solution

Programming Environment

EDICOMiPaaS offers a development environment to program and parameterize your app integration projects. This environment features advanced programming solutions to simplify and automate all your processes.

Monitoring Environment

EDICOMiPaaS offers a powerful dashboard with multi-query indicators. This monitoring environment enables real-time control of all active integration processes.

CONNECTIVITY TOOLS

Advanced tools for programming specific connectors. An updated inventory of APIs is kept with the principal market applications.

MAPPING TOOL

Dedicated mapping and data transformation functionalities.

PROCESS AUTOMATION

Rule and script programming tools to automate integration processes.

ALERT MANAGEMENT

Personalized alert configuration and control (key process supervision, message transmission timing, volumes, etc.)

Advanced project management

At EDICOM we don't just develop the most advanced app integration platform. We also take on the planning, development, and implementation of your iPaaS project.

QUALIFIED PROJECT MANAGERS

- ✔ ITIL | Licensed Affiliate
- ✔ PMI | Project Management Institute

1 Scope Definition

- Requirements analysis.
- Integration proposal.
- Project phase definition.
- Work team creation.

2 Architecture Installation

- HW architecture design.
- Resource installation.
- Permanent expansion and optimization.

3 Programming & Configuration

- App parameterization.
- Connector programming.
- Map design and validation rules.
- Script programming.
- Alert configuration.

4 Testing & Go live

- Running tests.
- Results verification.
- Error correction.
- Production step.
